

California Safe Drinking Water & Toxic Enforcement Act of 1986

Precast concrete products inherently contain crystalline silica and or crystalline quartz as a constituent ingredient. Our products are in this class of material. The state of California has included crystalline silica in the listing of known carcinogenic chemicals, thus we follow the guidelines of Proposition 65 in declaring a warning of such.

WARNING: Drilling, cutting, grinding, sawing or machining concrete products can expose you to crystalline silica dust if inhaled, a substance known to the State of California to cause cancer. Avoid inhaling crystalline silica dust, use a dust mask or other safeguards for personal protection.
